

ECO STOVE™

wraps your house in warmth

Ecco Stove at Woodbank HD6 2AL

It was a pure stroke of luck for us that we had decided to have the Ecco Stove installed at our house in autumn 2009 which was swiftly followed by the coldest winter on record since 1978. Unlike ordinary wood burners which only seem to keep you warm provided you sit close to the fire place the Ecco Stove emits the heat into the room whilst simultaneously retaining it in its body (built of silicon carbide). This turns out to be the ideal heating solution for us as we live in an old Victorian house with rather large rooms and high ceilings. When the stove is fully up and running we keep the door open to heat the surrounding hall and corridor too. I was initially worried that we would have to use up rather huge amounts of wood but that's not the case, after the initial firing one can add from time to time the odd log and the Ecco Stove keeps ticking over nicely to find the oven in itself still warm the next morning, giving out a pleasant glow of warmth long after the stove has been 'shut' down. The stove runs so efficiently that hardly any ash is left in the grate either, which is truly astounding and very hassle free and clean to handle. The boys just adore sitting in front of the stove watching the flames through the glass window. We are very pleased indeed with the product. Dave Ashmore and his team are very keen and personally committed and enthusiastic; so the stove also comes with a superb customer service package for piece of mind. Visitors to our house are always impressed with the good looks of the stove, too which with its classic design is easily at home in a Victorian or more modern home.
